Intro.

Frontend engineer with product designer background, looking for a great opportunity to put my skills to use.

Team player who is passionate about system thinking, problem solving and providing the best experience possible for users, flexible and ready to work with an agile team.

In my off hours I go for long walks, read, hang out with friends and family.

Work.

August 2019 - January 2022
Product designer at Begame Group, Amsterdam

As a member of the product team, my responsibilities included working **cross-functionally** with engineering, product management, and company leaders to bring products from concept to launch, as well as delivering **wireframes, user flows, high fidelity designs**, and other artifacts to agile development teams and refining them as needed during project sprints. I established our bingo and casino player **personas**, introduced the team how **rapid prototyping** can help our processes, and got the opportunity to further optimize our procedures through **unmoderated usability tests.** I was also in charge of our shared **component library** and collaborated closely with the customer experience and creative teams.

September 2017 - August 2019
Product designer at fashionTrade, Amsterdam

fashionTrade is a technology firm that was developed to make wholesale trade between fashion brands and retailers easier.

My major responsibility as a product designer was to analyze user and market demands, problems, and pain points, create prototypes, and perform usability tests to receive feedback on our industry knowledge and assumptions. Iterate on the user flows based on the findings to ensure a smooth experience for both the brand and the retailer. After all of that was sorted out, I sent the final UI to development and assisted them throughout the process.

February 2016 - August 2017
Visual designer at Syndy, Amstelveen

I began working as a visual designer at Syndy after relocating to the Netherlands. My daily responsibilities included designing landing pages, brochures, marketing assets, illustrations, charts, and infographics to describe our research and operations. I collaborated closely with the marketing manager, UX designer, and, on occasion, the content creation team.

Adobe Creative Suite   WordPress Visual Composer   Keynote   PowerPoint

April 2014 - May 2015
Multidisciplinary designer at webformance, Budapest

Adobe Creative Suite   Print   Newsletters   Landing Pages   Kanban

June 2012 - August 2017
Voulunteer graphic designer at Perinatus, Budapest
